

## Visual Search

DermEngine's Visual Search offers two features designed to provide medical professionals with relevant statistical data to support consultations. Both are valuable educational resources that can help provide researchers and medical students with information about characteristics and risks of different types of skin conditions.

### Top Diagnosis

When a medical professional submits a dermoscopic image into Visual Search, the software will provide top potential diagnoses for that particular image based on the diagnostic outcome of retrieved similar images.

### Malignant or Benign

When submitting a dermoscopic image, the medical professional will also receive the statistical likelihood of the image being malignant or benign. This information provides the expert with helpful data regarding the potential risks associated with the patient's skin condition,

DermEngine's Visual Search offers a variety of valuable tools that hold the potential to revolutionize how you perform consultations. If you would like to experience DermEngine's state of the art features for yourself, subscribe to a free trial to experience Visual Search and all of the platform's other features for free.
